---

Google is the most outstanding search company who has already presented a dozens applications either for computer or for Android just for users, free of charges. You surely know Google Reader for RSS feed access easily, Gmail for web-based email and Google Docs which serves as the word processing documents in the browser.

Google Docs application has been firstly applied through internet and could be accessed by both computer and Android. Previously, this application is less desirable. That's why Google attempt to improve the functionality and the features completed for more useful more and more.

The latest improvement for Google Docs app, Recently Google creates the update whereas its app could be accessed without any internet connection instead it could be utilized offline through their Android and Tablets.

With several enrichments for the more enjoyable features such as easy swiping and moving quicker and more intuitive thereby the users could be easier to find what they want to see, Google Docs now is more interesting and could be utilized more effective.

Moreover, Android tablets provide the more widely screen therefore the user feel more convenient to utilize its app. In addition, the Android Tablets has the smaller size and the easy to carry wherever you go so that you will be easier to make certain word documents using it on the go without any difficulty to carry laptop as well as internet connection need.

Thanks to Camera Android Tablets attached in whereas you are able to get picture with the camera, then you will easily edit and process your picture in this app, save in local storage and then directly up load it through internet to be shared to everyone you want.

This awesome app just like the other apps presented by Google is also free downloaded from Android Market. So as if you are interested in utilizing it directly, you could download it straightforwardly.
